

Serpent is offering a free replacement program on the wishbones of the Cobra SRX8 buggy.

Updated wishbones are:

- More durable
- Wider flex control range

With the currently wishbones, especially the front ones broke under severe impact, but for our quality standards they broke too quick. To warranty our high quality image we decided to do a full replacement program of the front and rear wishbones.

The updated wishbones are beefed up in some locations and they are now made in a softer material which has more flex than before, to create more overall grip. By using the moulded or carbon inserts, top and or bottom, the arm can be made stiffer as needed.

At the same time we also changed the position of the set screw (see in yellow in the right pictures) that keeps the spring-steel shock-bolt in position. It's been moved more to the inside of the arm. For this new shock-bolts are made with the groove closer to the end instead of at the front.

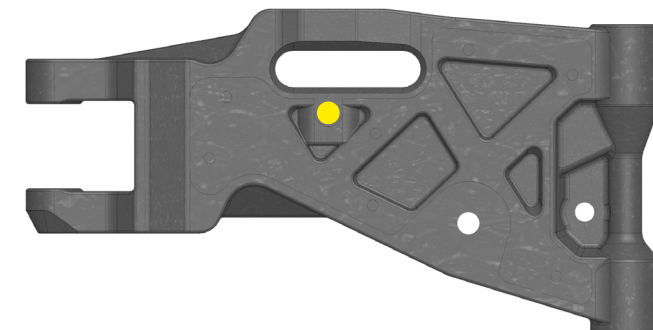

Serpent will ship the replacement arms and shock-bolts to all distributors, and they will distribute the parts to the drivers, through the dealers. The new parts will not be shipped to you by separate mail, but can be included in a new order you place.

As we do a full exchange program, the part numbers remain the same as before.

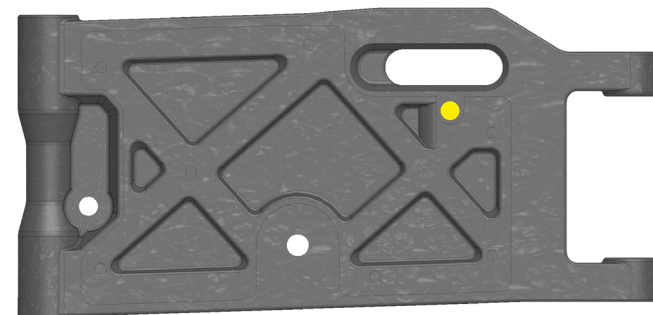

Shipping of new arms to distributors will commence 28th of June, so before mid July all drivers should be able to receive new wishbones .
